

## Llety Cynin

With EVs becoming more and more popular for both personal and business use, the UK has recorded over 2 million fully electric vehicle (EV) registrations for the first time. This is a significant milestone, but there will be plenty more EVs on Britain's roads every year as EVs take up more and more share of the 32 million cars registered in total.

Llety Cynin is a lovingly converted coach house on a working dairy farm in the Carmarthenshire countryside. It has been run as a family business since 2008 and boasts 13 en-suite rooms, a spa, and leisure centre complete with a 40-foot indoor heated swimming pool, restaurant and bar, and hosts a number of weddings and events each year.

EvieLife conducted a site survey and completed the electrical design for the installation, so everything was taken care of for Llety Cynin. After the winter 2022/23 spike in electricity prices, Llety Cynin had to implement a diesel generator to protect their business from the uncertainty of the energy price market. EvieLife diligently designed the system to deal with any possible fluctuations caused by the generator.

In addition to this, EvieLife were proud to assist Llety Cynin to secure a 57% reduction in their electricity bill by working with a strategic partner, Commercial Energy Group. EvieLife will continue to provide advice to Llety Cynin over the duration of the partnership to ensure they always receive competitive rates on their energy costs.

## PROJECT SUMMARY

### PROJECT DURATION

3 weeks

### NUMBER OF CHARGERS

Dual output charger

### CHARGER SPECIFICATION

- Charger up to 22kW
- Contactless payment supported
