

Everything you need to know about EV charging, the benefits it will bring to your business and how to approach an EviLife strategy.

EV CHARGING FOR DEVELOPERS

THE EvieLife SUMMARY

WHY SWITCH?

Get ahead of the competition...

The change from petrol-powered to electric vehicles is going in one direction, and it's going there fast.

By the end of this decade, it is estimated there will already be 10 million electric vehicles on the road. This could rise to 36 million by 2040 due to the sales ban on new, internal combustion engine cars from 2030.

Organisations like yours are being expected to support this drive towards zero emissions through the provision of charging facilities at new developments.

EvieLife specialises in the installation of a range of market-leading charging units.

Using OZEV approved installers we ensure a reliable, cost-effective service that helps developers meet both planning regulations and customer expectations.

EvieLife Journey

01

BENEFITS TO YOUR CLIENT BASE

Why you should promote
an EvieLife to your clients.

Electric vehicles not only save the end user money but also reduce carbon emissions, helping the environment.

It is estimated that 80% of charging will happen at home or in the workplace. Providing high-quality charging units to your customers will be an attractive proposition when they are deciding on a residential purchase.

02

BENEFITS TO DEVELOPERS

Why you should choose an EvieLife for your business.

Helping others switch to electric vehicles will help slow the impact of climate change and enhance your brand's environmental credentials.

You will be meeting planning requirements around the provision of EV charging units for households.

For every EV charger installation we undertake, EvieLife will plant a tree through TreeSisters.

EvieLife strategy.

The Installation Process

01

On-Site Review

Our EvieLife team will come to your site and assess the requirements and best solutions.

02

Cost Proposal

We will identify the most appropriate charging unit options and provide a full proposal with costs, details of grant funding and tax savings, confirmation of the installation process and site survey (including info on any groundworks that may need to be done prior to the installations).

03

Installation

We will carry out the full installation process on-site, at a time convenient to you. Our after-sales service includes warranties that cover the unlikely event of equipment failure.

CONTACT US...

It would be good to meet to discuss the ways in which we can support you and establish what the best next steps would be.
